2022-2023

SCHAEFFLER

We pioneer motion

Con nuestros productos y soluciones innovadoras, estamos preparando el camino para la movilidad del futuro que será guiada por la movilidad eléctrica, optimizando los motores de combustión interna que actualmente se utilizan. Aunque actualmente seguimos participando activamente en ambos campos, estamos creando una base firme para la movilidad eléctrica a través de nuestra división de sistemas de e-Mobility. Y en el caso de los motores de combustión interna, trabajamos para convertir el potencial de optimización hasta un 30% más eficaz.

Actualmente, Schaeffler es un proveedor para casi todos los fabricantes de vehículos automotores. Sin embargo, en cuanto a movilidad, no nos limitamos a la división automotriz. Schaeffler tiene una gran participación en el desarrollo y fabricación de rodamientos y componentes de precisión para maquinaria de otras industrias. Ha suministrado una amplia gama de productos tanto al mercado de los vehículos impulsados por pedales convencionales, como para bicicletas eléctricas (e-bikes). Además, tenemos más de 100 años desarrollando soluciones innovadoras para aplicaciones en vehículos ferroviarios, tales como rodamientos de rueda, componentes para motores de tracción y de transmisión; rodamientos para vagones de tren y sistemas de inclinación, así como puertas y otras numerosas aplicaciones. En el sector aeroespacial, hemos fabricado rodamientos de alta precisión para motores de aviones, helicópteros, así como para el Transbordador Espacial de Estados Unidos, y el vehículo de lanzamiento "Ariane" en Europa.

Respecto a la movilidad del futuro, continuamos avanzando a lo largo del camino para que nuestra compañía siga siendo considerada como una empresa líder en innovación, brindando respuestas inteligentes a los grandes retos que nos presentan los avances tecnológicos.

FAG

¿Por qué merece la pena apostar por los rodamientos de rueda FAG?

Los rodamientos de rueda son componentes relevantes para la seguridad. En FAG, la calidad es inherente a todos los niveles. El material, el desarrollo, la fabricación y las pruebas cumplen las máximas exigencias. FAG tiene una presencia en el mercado de los turismos especialmente destacada entre la competencia. Pero ese no es el único punto fuerte de la marca; gracias a sus innovaciones patentadas, FAG es el socio de desarrollo preferido en la industria automovilística, impulsa el desarrollo continuo y ofrece la solución adecuada frente a cualquier problemática.

- 1 Rodamiento de rodillos cónicos estándar
Rodamiento de rodillos cónicos separable

- 2 Generación 1
Rodamiento de bolas de contacto angular de dos hileras con/sin codificador multipolar

- 3 Generación 1T
Rodamiento de rodillos cónicos de dos hileras con/sin codificador multipolar

- 4 Generación 1
Rodamiento de bolas de contacto angular de dos hileras con corona de bloqueo y con/sin codificador multipolar

- 5 Generación 2
Rodamiento de bolas de contacto angular de dos hileras con codificador convencional

- 6 Generación 2
Rodamiento de bolas de contacto angular de dos hileras con codificador multipolar

- 7 Generación 2D
Rodamiento de rodillos cónicos de dos hileras

Las innovaciones de FAG marcan tendencia en la industria automovilística. FAG no solo ha creado y patentado la máquina rectificadora de bolas para conseguir bolas perfectas, inició la industrialización de la producción de rodamientos. Con la invención del proceso de conformado orbital FAG hizo posible definir y preajustar la tensión previa del rodamiento desde el principio. Desde entonces, el cambio de rodamientos de rueda resulta más sencillo y seguro. La corona de bloqueo y el dentado Hirth aportan mayor seguridad y permiten agilizar los procedimientos de reparación. Al mismo tiempo, el sello de baja fricción LFT protege eficazmente los modernos rodamientos de rueda FAG frente a la suciedad y proporciona también mayor eficiencia debido a la fricción reducida.

- 8** Generación 2.1
Rodamiento de bolas de contacto angular de dos hileras con conformado orbital, codificador multipolar y corona de bloqueo

- 9** Generación 2.1
Rodamiento de bolas de contacto angular de dos hileras con conformado orbital, codificador multipolar y corona de bloqueo

- 10** Generación 3
Rodamiento de bolas de contacto angular de dos hileras con conformado orbital

- 11** Generación 3
Rodamiento de bolas de contacto angular de dos hileras con conformado orbital, codificador multipolar y sensor

- 12** Generación 3.2
Rodamiento de bolas de contacto angular de dos hileras con conformado orbital y codificador multipolar

- 13** Generación 3.2
Rodamiento de bolas de contacto angular de dos hileras con conformado orbital y codificador multipolar, estriado axial y sello de baja fricción

Vehículos de pasajeros y carga ligera

Calidad de equipo original para el mercado de Repuesto

Tecnología FAG en el equipo original para automóviles:

Audi, Volvo, BMW, VW, Ford, Daimler, Chrysler, GM, Fiat, Daewoo, Honda, Hyundai, Isuzu, Mazda, Mitsubishi, Porsche, Proton, Renault, Nissan, PSA, SsangYong, Suzuki, Toyota.

Lo que en la actualidad se considera estándar de alta tecnología en la industria automotriz, se ha ido desarrollando paso a paso a lo largo de las últimas décadas. Pero se prevé que el vehículo del futuro no sólo será más rápido, sino sobre todo más rentable. El desgaste de los distintos componentes debe mantenerse lo más reducido posible. Todos los fabricantes de vehículos conocidos apuestan por la innovación y la rentabilidad. **FAG** satisface los requisitos del mercado y nuestra división automotriz, produce y vende componentes para vehículos orientados al cliente.

Generaciones de rodamientos de rueda

Rodamiento de rodillos cónicos

Este tipo de rodamientos son separables. El cono y la taza pueden montarse por separado. Como los rodamientos de rodillos cónicos sólo pueden absorber fuerzas axiales en una dirección, resulta necesario un segundo rodamiento de rodillos cónicos colocado a la inversa como contraguía. En esta característica, pueden compararse con los rodamientos de bolas de contacto angular, pero con mayor capacidad de carga y menor aptitud para altas velocidades.

Ventajas:

- Para ruedas traseras con freno de tambor
- Alta capacidad de carga
- Diseño que ahorra espacio

Rodamiento de contacto angular de doble hilera de bolas

Rodamiento 1ª generación

Los rodamientos de rueda de 1ª generación son unidades compactas que FAG equipa con juego radial interno, definido y ajustado previamente, lubricación para toda la vida útil (sin mantenimiento) y sello de obturación.

FAG ha desarrollado rodamientos de bolas de contacto angular con alta capacidad de carga, para soportar las fuerzas laterales al conducir en curva para ruedas delanteras y traseras.

Actualmente este tipo de rodamientos son fabricados con encoder magnético para ser utilizados en sistemas de frenado ABS/ESP.

Rodamiento de contacto angular de doble hilera de rodillos cónicos (1T)

Rodamiento 1ª generación

Son rodamientos compactos que poseen rodillos cónicos en lugar de bolas como elementos rodantes. El uso de rodillos cónicos permite elevadas cargas del eje y altas aceleraciones laterales.

Estos rodamientos están lubricados para toda la vida útil (sin mantenimiento) y con precarga de rodamiento definida.

Ventajas:

- Juego interno definido y ajustado previamente
- Lubricación para toda la vida útil
- Sellos de obturación (evita la contaminación)
- Aplicación para ruedas delanteras y traseras

Maza (Hub) de rueda 2ª Generación

Son unidades de rodamiento compactas que FAG equipa con juego interno definido y ajustado previamente, lubricación para toda la vida útil (sin mantenimiento) y sellos obturación.

Combinan la rentabilidad de los rodamientos de rueda de la 1ª generación con las ventajas de la integración de una brida de rueda para fijar el disco de freno y la llanta. La maza (Hub) se asegura a la mangueta con un innovador anillo de seguridad que también garantiza la sujeción axial del anillo exterior del rodamiento.

Ventajas:

- Juego interno definido y ajustado previamente
- Integración de la brida de rueda
- Innovador anillo de seguridad que garantiza la sujeción axial del anillo exterior del rodamiento y que asegura el rodamiento a la mangueta.
- Unidad completamente preajustada
- Para algunas aplicaciones, se integra el encoder en los sellos para los sistemas ABS, ASR y ESP.

Maza (Hub) de rueda 3ª Generación

Las mazas (Hub) de 3ª generación son unidades integradas con sistema de fijación para el disco de freno, la llanta y la mangueta que garantizan una alta precisión de rodadura. Los sensores integrados generan las señales ABS/ESP necesarias para el control de frenado. FAG aplica y controla la fuerza de apriete del rodamiento mediante una unión en frío (diseño orbital). Menor esfuerzo y facilidad de montaje gracias a la versión con dos bridas. De este modo, las fallas de funcionamiento a causa del montaje pertenecen definitivamente al pasado.

Ventajas:

- Sensor integrado de revoluciones de las ruedas para controlar ABS, ASR y ESP
- Lubricación para toda la vida útil y sellos de obturación
- Acoplamiento preciso del disco de freno y las ruedas
- Fácil montaje gracias a la versión con dos bridas
- La fuerza de apriete del rodamiento se aplica de forma controlada

Maza (Hub) de rueda 3ª Generación con estriado axial

En los sistemas convencionales, la transmisión del torque de accionamiento entre el rodamiento de rueda y el muñón del eje se produce a través de un dentado radial que presenta una cierta holgura para facilitar el montaje. Debido a las cargas continuas durante la conducción u operación, existe el riesgo de que la unión se afloje permanentemente más allá del juego de montaje original, lo cual tiene como consecuencia pérdidas de comodidad, desagradables ruidos y averías del rodamiento.

En cambio, el nuevo módulo de rodamiento de rueda FAG con estriado axial convence por su sencillo montaje: el dentado axial autocentrable se coloca en el muñón del eje y se fija a la unión mediante el tornillo central. En funcionamiento, el rodamiento no presenta ningún tipo de juego en el dentado durante su vida útil.

Ventajas:

- Ahorro de peso del 10% en comparación con el rodamiento de rueda convencional, en total más de 1 kg en las cuatro ruedas
- Reducción del consumo de combustible
- Reducción de emisiones de CO2 perjudiciales
- Montaje más sencillo del eje de transmisión
- Unión sin juego con el eje de transmisión
- 50% más de transmisión de torque en comparación con el dentado radial

Diagnóstico de fallas

Las aplicaciones modernas de rodamientos de rueda de la gama de productos FAG están diseñadas para ofrecer una máxima vida útil. La garantía es mayor en lo que respecta a seguridad de funcionamiento y conducción gracias a las elevadas exigencias en materia de calidad y el confiable estándar de fabricación del Grupo Schaeffler.

En condiciones óptimas, las aplicaciones de rodamientos de rueda pueden lograr un kilometraje considerable. Sin embargo, hay muchos factores adversos, entre los que figuran:

- Condiciones del camino
- Topes, baches
- Montaje defectuoso
- Estado de los componentes que interactúan
- Clima
- Errores de aplicación
- Desmontaje erróneo

Para garantizar un manejo seguro de los rodamientos de rueda, hay que tener en cuenta ineludiblemente factores como el estado del vehículo, el entorno de los componentes, la limpieza y el equipamiento del taller.

Únicamente personal especializado y formado puede realizar los trabajos en componentes de seguridad.

Para cumplir estas condiciones, debe garantizarse el acceso a los datos técnicos actuales de los fabricantes de vehículos.

El riesgo de sufrir fallas prematuras en los rodamientos de rueda se reduce a un mínimo con un montaje profesional y siguiendo las indicaciones mencionadas anteriormente. En primer lugar, los daños en los rodamientos pueden reconocerse por un cambio en el comportamiento de conducción. Al inspeccionar los rodamientos dañados pueden verificarse las distintas características. Para analizar la causa pertinente de la falla, a menudo no basta con examinar simplemente el rodamiento, sino que además hay que tener en cuenta los componentes adyacentes, la lubricación y los sellos de obturación, así como las condiciones ambientales y de servicio.

Unos sólidos conocimientos técnicos y un procedimiento estructurado, son condiciones básicas para diagnosticar y evaluar daños en rodamientos.

Descripción de fallas

Corrosión

La penetración de humedad en los rodamientos es una de las causas más frecuentes de falla. La consecuencia inevitable es la formación de corrosión. En este sentido, se diferencia entre corrosión externa debida al uso y corrosión provocada por las causas de fallas mencionadas a continuación, como errores de montaje, manipulación, etc.

Causa

- Penetración de humedad

Consecuencias

- Sobrecalentamiento del rodamiento
- Formación de corrosión
- Degradación de la grasa

Solución

- Garantizar el funcionamiento adecuado de los componentes adyacentes
- Evitar el uso de limpiadoras de alta presión al llevar a cabo medidas de limpieza
- Respetar las indicaciones de montaje del fabricante
- Prestar atención a la limpieza al realizar una lubricación manual
- Utilizar lubricante adecuado y limpio
- Garantizar la limpieza de los componentes adyacentes durante el montaje

Componentes adyacentes

Las fallas en relación con los componentes adyacentes, como por ejemplo; la mangueta, pueden dar lugar a una falla prematura del rodamiento. A pesar de ello, a menudo se pasan por alto al examinar un daño del rodamiento. Antes de montar el rodamiento debe revisarse minuciosamente el funcionamiento correcto de los componentes adyacentes.

Causa 1

- Situación de ajuste/deformación oval

Consecuencias

- Asiento incorrecto del rodamiento
- Penetración de humedad
- Aparición de ruidos

Solución

- Garantizar el funcionamiento de los componentes del eje
- Comprobar si la mangueta presenta alguna deformación oval

Causa 2

- Daño mecánico en el cable **ABS**

Consecuencias

- Avería en el sistema de frenos **ABS**
- El funcionamiento del **ABS** no está garantizado debido a un daño mecánico

Solución

- Garantizar el montaje de acuerdo con las indicaciones del fabricante
- Colocar el cable correctamente y evitar el contacto con las piezas en movimiento

Daño mecánico/fallas de montaje

A menudo, un montaje inadecuado da lugar a una falla prematura de un rodamiento de rueda. Por lo tanto, resulta indispensable utilizar la herramienta adecuada y seguir las indicaciones de instalación y las normas del fabricante.

Causa 1

- Montaje inadecuado
- Uso de herramienta de impacto para el montaje

Consecuencias

- Influencia de cuerpos extraños
- Asiento incorrecto del rodamiento
- Inclusiones en las pistas de rodadura
- Deformación de la jaula

Solución

- Respetar las normas del fabricante durante el montaje
- Utilizar únicamente la herramienta apropiada

Causa 2

- Penetración de humedad, por falta o daño de la tapa cubrepolvo

Consecuencias

- Formación de corrosión
- Degradación de la grasa

Solución

- No olvidar revisar el estado de la tapa durante el montaje, reemplazar por una nueva en caso de ser necesario.

Manipulación

Desde hace mucho tiempo, los rodamientos de rueda proporcionan datos para el **ABS**. Por lo tanto, una avería en el **ABS** también puede buscarse en el rodamiento de rueda y/o en los respectivos sensores. Una manipulación inadecuada puede provocar errores de funcionamiento.

Causa 1

- Daño mecánico
- Codificación **ABS** defectuosa

Consecuencias

- El funcionamiento del **ABS** no está garantizado debido a un daño mecánico
- Avería en el **ABS**

Solución

- Al cambiar el rodamiento, tener en cuenta sin falta su dirección de montaje
- Mediante la tarjeta de identificación FAG, determinar el anillo generador de impulsos integrado en el rodamiento y de este modo la dirección de montaje correcta del rodamiento

Causa 2

- Daño/rotura del cable **ABS**

Consecuencias

- El funcionamiento del **ABS** no está garantizado debido a un daño mecánico

Solución

- No transportar la maza (Hub) agarrando el cable **ABS**

Recomendaciones de Montaje

Rodamiento 1ª Generación

1. El rodamiento de rueda se introduce a presión en el alojamiento de la mangueta a través de su pista exterior. Para ello, se utiliza una placa de presión circular con apertura, que se encarga de que la fuerza de presión sea conducida uniformemente a través de la pista exterior. La mangueta está situada sobre la placa base de la prensa.

Los rodamientos que tiene chaflán en el aro exterior, deben ser insertados sobre esa cara, esto ayuda a evitar que el rodamiento se ladee y entre inclinado, lo cual generaría inclusiones no deseadas en las pistas de rodadura.

Para asegurar axialmente el rodamiento de rueda, se coloca un anillo de seguridad en la ranura de la mangueta con unas pinzas especiales.

Atención:

Se debe evitar por todos los medios, que la fuerza de presión se transmita a través de las bolas del rodamiento. Esto puede provocar muescas o inclusiones en las superficies de rodadura y dañar el rodamiento.

2. La maza (Hub) de 1ra. generación se coloca sobre la base de una prensa. El rodamiento premontado en la mangueta se presiona con ayuda de un buje o también puedes utilizar el aro interior del rodamiento usado.

En algunos vehículos, la disposición de los componentes que hay que montar está al revés. La mangueta está situada sobre la placa base y la maza (Hub) se introduce a presión desde arriba.

Atención:

El buje sólo puede colocarse en la parte frontal de la pista interior durante la inserción para que no se produzcan muescas o inclusiones en la superficie de rodadura.

La tuerca de fijación o seguridad de la espiga, debe apretarse con el torque de apriete recomendado por el fabricante del vehículo. El torque de apriete de la tuerca no sólo es importante para fijar la rueda, sino que además garantiza que el rodamiento disponga del juego óptimo. El uso de un torquímetro permite lograr el torque de apriete correcto.

RESISTENCIA.

INA FEAD Belts (Bandas Poli-V)

El portafolio de productos INA se complementa: FEAD Belts, en vehículos modernos, las bandas con costillas son la solución más moderna. Estas bandas muestran varias costillas en forma de V de manera longitudinal, son más delgadas y soportan mayor fricción; ya que las rutas que las bandas siguen son más pequeñas, al igual que el tamaño de las poleas tensoras y/o guías. Por tal razón, éstas pueden transmitir cargas más pesadas y resistir mayor tensión

Con más de 500 números de parte, garantizamos una amplia cobertura para todas las marcas y modelos del mercado mexicano

LA UNIÓN PERFECTA

FAG

Mediante la integración de los rotores y tambores con los rodamientos de calidad Equipo Original, Schaeffler da un paso adelante en la oferta de Soluciones de Reparación para el instalador.

La instalación de los rotores y tambores con rodamientos pre-ensamblados (donde aplica) no sólo garantiza el perfecto ensamble del rodamiento asegurando así una larga vida útil, si no que también ahorra tiempo y reduce costos de reparación.

SCHAEFFLER

El interior sí cuenta

Los productos piratas en su exterior, pueden llegar a lucir idénticos a los originales, pero son fabricados con aceros, sellos y grasas de baja calidad. Se comercializan con precios muy inferiores, comparados con los precios del fabricante original. Al principio se podría considerar un ahorro en el costo, pero el beneficio sólo será a corto plazo, ya que la vida útil es reducida, las fallas prematuras pueden incluso ocasionar daños a los componentes o sistemas que interactúan en la rueda.

A continuación algunas de las razones a las que debes poner atención al comprar un rodamiento de rueda.

Todos los rodamientos son fabricados bajo especificaciones de nuestros clientes de equipo original, de acuerdo a peso bruto vehicular, carga adicional, velocidades máximas, cargas axiales, cargas radiales, entre otras.

Lo que define qué **capacidad de carga** o **peso** puede soportar un rodamiento, está relacionado con varios factores, entre los más importantes se mencionan los siguientes:

1. Tipo o diseño del rodamiento (contacto angular, rígido, auto-ajustable, etc.)
2. Dimensiones del rodamiento
3. Tipo de elementos rodantes (bolas o rodillos)
4. Números de elementos rodantes y dimensiones de los mismos
5. Materiales y tratamientos

En el mercado de repuesto mexicano, se está comercializando una versión pirata de nuestro rodamiento **546467** para rueda trasera de los siguientes vehículos:

CHEVROLET - PONTIAC	
Aveo	08 - 11
Spark	11 - ->
G3	07 - 09

NISSAN	
Aprio	08 - 09
Micra	05 - 07
Platina	02 - 10

PEUGEOT	
206	00 - 09
206	01 - 09
306	97 - 02

RENAULT	
Clio	02 - 09
Laguna	03 - 06
Megane	01 - 03

Diferencias en rodamiento 546467

FAG

1. Fabricado con doble hilera de rodillos cónicos.
2. Diseñado para soportar cargas radiales y axiales en los autos que equipo.
3. Cargas y velocidades máximas perfectamente calculadas.
4. Selección óptima de materiales (Aceros, sellos, jaulas, grasa, rodillos).
5. Tratamientos térmicos controlados.

1. Fabricado con doble hilera de bolas.
2. Las bolas utilizadas son 38% más pequeñas, comparadas al estándar utilizado en este tipo de rodamientos.
3. Reducción consistente en la capacidad de carga.
4. Los materiales utilizados presentan fatiga prematura bajo las condiciones de operación exigidas en la rueda (temperatura, revoluciones, carga, ambiente, etc.).
5. Tratamientos térmicos ausentes o deficientes.

Bola utilizada en rodamientos pirata de 7.9 mm de diámetro

FAG

Bola estándar utilizada en este tipo de rodamientos

Un vistazo al interior, muestra la verdadera calidad.

EFICIENTE.

FAG

Juntas Homocinéticas y Cubrepolvos FAG

Las Juntas Homocinéticas FAG son fabricadas con tecnología de control de alta precisión, la cual es visible en su acabado superficial brillante y sin grietas. También, son sometidas a tratamientos térmicos que aportan alta resistencia a todos sus componentes, lo que permite un desempeño mecánico excelente.

DESARROLLO PRECISO.

FAG

La innovación ha guiado el desarrollo de FAG por décadas. . .

Hace más de 135 años, el fundador de FAG, Friedrich Fischer inventó la rectificadora de bolas de acero. Este invento es la base para lograr el mayor nivel de calidad y precisión en la producción de nuestros rodamientos de rueda — eso es la calidad Schaeffler.

REALMENTE TODO.

FAG

Todo lo que necesitas, ensamblado con la mayor precisión.

Cuando desarrollamos soluciones de reparación de rodamientos, lo hacemos al 100%. Esta premisa no solo aplica a la calidad y confiabilidad de nuestros productos, sino también al amplio rango de aplicaciones que ofrecemos. Diseñadas con la mayor precisión y con todos los componentes requeridos. Soluciones simples incluso para aplicaciones complejas — eso es la calidad Schaeffler.
